

SWAPPIT

MISSION

To maximize users' cryptocurrency utility by giving them the most efficient solution to unlock their purchasing power without compromising their exposure through our crypto-backed loaning platform.

THE PROBLEM

Given widespread speculation on cryptocurrency prices, holders have become increasingly reluctant to use their cryptocurrencies, resulting in low money velocity and negligible utility. Platforms that provide collateralized loans have been the most promising solution to the abovementioned problems.

However, many of the existing platforms in the market charge exorbitant interest rates of up to 18% as a result of high risk premiums charged by lenders.

THE SWAPPIT SOLUTION

Through the use of derivatives, we allow users to create synthetic borrowing through their own cryptocurrencies. This is all achieved through our proprietary trading algorithms. We have eliminated the need for accredited lenders to match user loans, allowing us to offer our users instant, affordable loans at interest rates less than half of the closest competitor.

The Swappit platform offers:

- A lending platform that provides fiat loans that are secured by cryptocurrency collateral;
- Swap (SWAP) Tokens are used to pay fees and facilitate transactions within the platform.

HOW IT WORKS

Users deposit their cryptocurrency into the platform as collateral, and in return, will receive fiat to participate in traditional economies without foregoing the price appreciation of cryptocurrency.

To guarantee transparency, Swappit will keep all records of agreements on the main network of the Ethereum blockchain. All agreements will be governed by immutable smart contracts, creating a trustless environment.

WHY SWAPPIT?

Affordable

We offer the lowest interest rate in the industry (4.8% APR).

Fast

Loans are funded by users' own cryptocurrencies, allowing for instant financing.

Customizable

Users have full control over all contract terms, including loan amount, maturity date, and preferred payment method.

Secure

Sensitive data is stored offline and encrypted using the strongest cipher.

Flexible

All contracts can be adjusted at any time. We understand things can change and we fully support our users' needs.

Scalable

Our innovative system is fully scalable; we leverage the liquidity of the derivatives market rather than rely on lenders.
